HOLY ANGEL UNIVERSITY

A. Every Screen, Drawn and Labelled

The table below presents all 29 screens included in the PokéBinder mockups, including the newly created screens that were not included in the original wireframes. Each screen is paired with its corresponding mockup and a detailed description of its purpose, user actions, navigation, and interactions.

Screen	Screen Details
01 · Login 	Authentication · Wireframe page 6 Purpose The Login screen serves as the main entry point for returning users. It allows users to access their PokéBinder account using their registered email address and password. The screen also provides navigation to account creation and password recovery for users who cannot log in. User Actions and Flow • The user enters their email address and password. • Tapping Log in with valid credentials takes the user to 04 Home Dashboard. • Tapping Forgot password? takes the user to 02 Forgot Password. • Tapping Sign up takes the user to 03 Sign Up. Navigation The Login screen is reached when the application is launched while the user is signed out. Successful authentication takes the user directly to the Home Dashboard, which serves as the main starting point for the application.

HOLY ANGEL UNIVERSITY

02 · Forgot Password

< Back

Reset Your Password

Enter the email on your account and we'll send you a reset link.

EMAIL

ash@pallettown.com

Send Reset Link

Remembered it? [Log In](#)

Authentication · Wireframe page 6

Purpose

The Forgot Password screen allows users who cannot remember their password to request a password reset. The user provides the email address associated with their account and receives instructions for resetting their password.

User Actions and Flow

- The user enters their registered email address.
- Tapping **Send reset link** sends the password reset request and returns the user to **01 Login**.
- Tapping < **Back** returns the user to **01 Login** without submitting the request.
- Tapping **Remembered it? Log in** also returns the user to **01 Login**.

Navigation

This screen can only be reached from the Login screen through the **Forgot password?** option. After completing the reset request, the user returns to the Login screen to continue the authentication process.

HOLY ANGEL UNIVERSITY

03 · Sign Up

Authentication · Wireframe page 6

Purpose

The Sign Up screen allows new users to create a PokéBinder account. The form collects the information required to establish the user's account and begin tracking their Pokémon card collection.

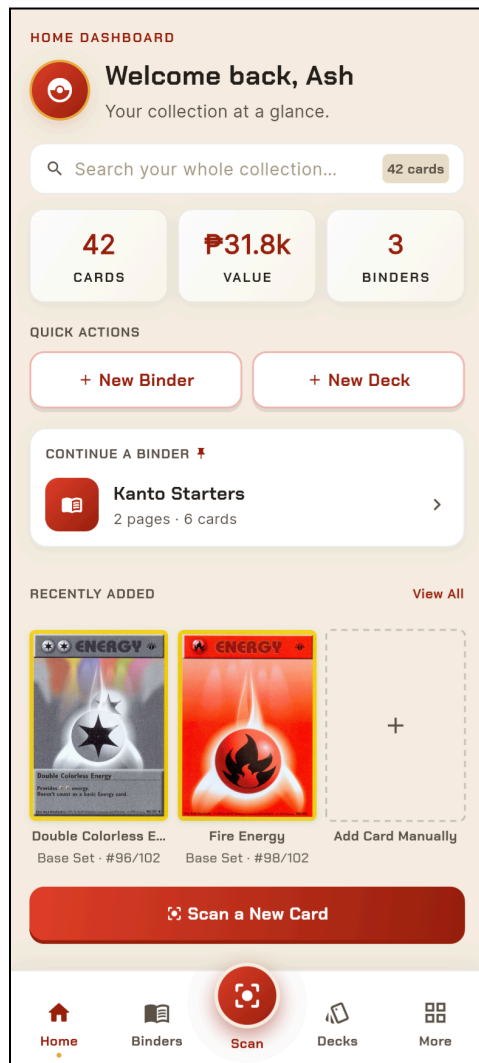

User Actions and Flow

- The user enters a trainer name, email address, password, and password confirmation.
- Tapping + **Create Account** with valid information creates the account and takes the user to **04 Home Dashboard**.
- Tapping **Already have an account? Log in** takes the user to **01 Login**.
- Tapping < **Back** returns the user to **01 Login**.

Navigation

The screen is primarily reached from Login through the **Sign up** option. After successful account creation, the user enters the main application through the Home Dashboard.

04 · Home Dashboard

Home & Profile · Wireframe page 6

Purpose

The Home Dashboard provides an overview of the user's collection and acts as the main navigation point for the application's core features. It gives the user quick access to card scanning, binders, decks, collection statistics, and their trainer profile.

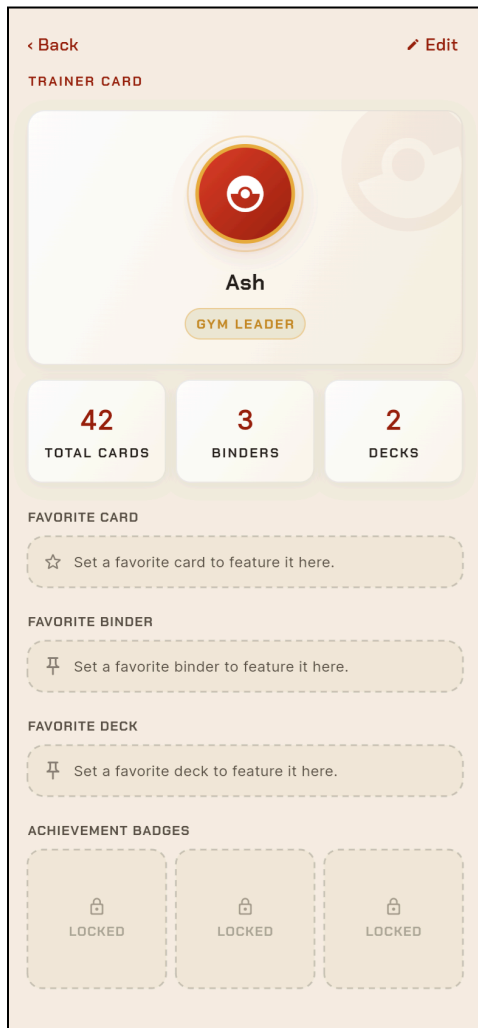

User Actions and Flow

- The **Search bar** allows the user to search and filter their collection directly from the dashboard.
- The **Total Cards** tile takes the user to **13 All Cards**.
- The **Estimated Value** tile takes the user to **25 Collection Statistics**.
- The **Binders** tile and **Continue a binder > Open** option take the user to **08 Binders**.
- Selecting a recently added card opens **14 Card Details**.
- **+ New binder** opens **09 Create Binder**.
- **+ New deck** opens **20 Create Deck**.
- **+ Scan a new card** opens **15 Card Scanner**.
- Tapping the **Avatar** opens **05 Trainer Card**.
- The bottom navigation bar provides access to the main sections of the application.

Navigation

The Home Dashboard is reached after successful login or account creation. It is also the main destination of the Home tab and serves as the starting point for the application's primary collection management tasks.

05 · Trainer Card (Profile)

Home & Profile · Wireframe page 6

Purpose

The Trainer Card screen presents the user's profile and collection identity. It displays the user's avatar, trainer information, collection totals, favorite deck, favorite Pokémon, and achievement badges.

User Actions and Flow

- Tapping < **Back** returns to **24 More Hub** when opened from the More section.
- When opened through the Home Dashboard avatar, < **Back** returns to **04 Home Dashboard**.
- Tapping **Edit** opens **06 Edit Trainer Card**.
- The user can review their trainer information and achievements without modifying them directly on this screen.

Navigation

The Trainer Card can be reached from the **More Hub** or directly through the user's avatar on the Home Dashboard. The Edit option provides access to the profile customization screen.

06 · Edit Trainer Card

< Back

Edit Trainer Card

Update how your trainer card introduces you.

TRAINER NAME

Ash

TITLE

Gym Leader

FAVORITE CARD

Choose a favorite card

FAVORITE BINDER

No favorite

FAVORITE DECK

No favorite

BIO (OPTIONAL)

A line about your collection or trainer journey

Cancel ✓ Save Changes

Home & Profile · Wireframe page 6

Purpose

The Edit Trainer Card screen allows users to customize the information displayed on their trainer profile. This includes their avatar, name, title, favorite Pokémon, favorite deck, card back, country, and biography.

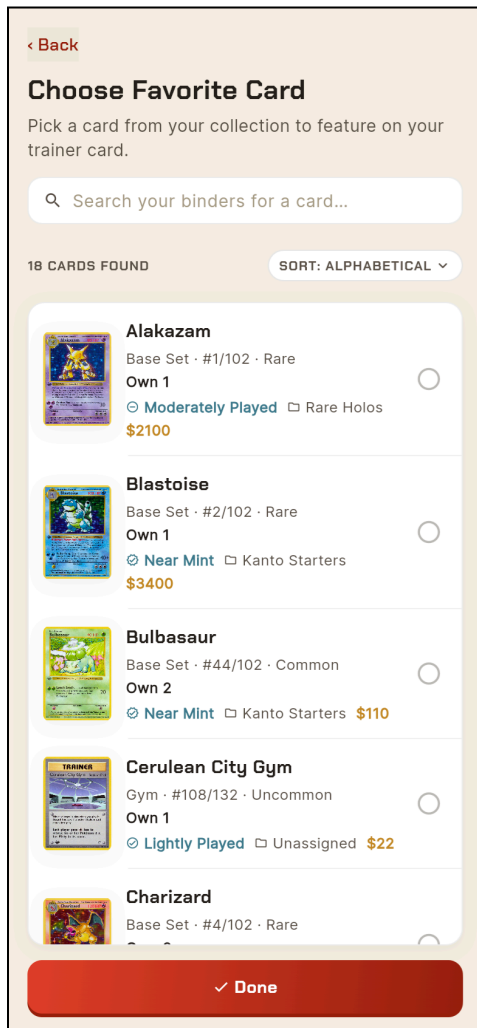

User Actions and Flow

- The user can select a preset avatar or upload a profile photo.
- The **Favorite deck** and **Card back** dropdowns open selection controls while keeping the user on the same screen.
- Tapping **Cancel** discards changes and returns to **05 Trainer Card**.
- Tapping **✓ Save changes** saves the updated profile information and returns to **05 Trainer Card**.

Navigation

The screen is reached from the Trainer Card through the **Edit** option. Both Cancel and Save changes return the user to the Trainer Card after the corresponding action is completed.

07 · Choose Favorite Card

Home & Profile · New: Not in the wireframes

Purpose

Allows the user to choose the card that will be featured on their Trainer Card. The user can browse their collection and select one card as their current favorite.

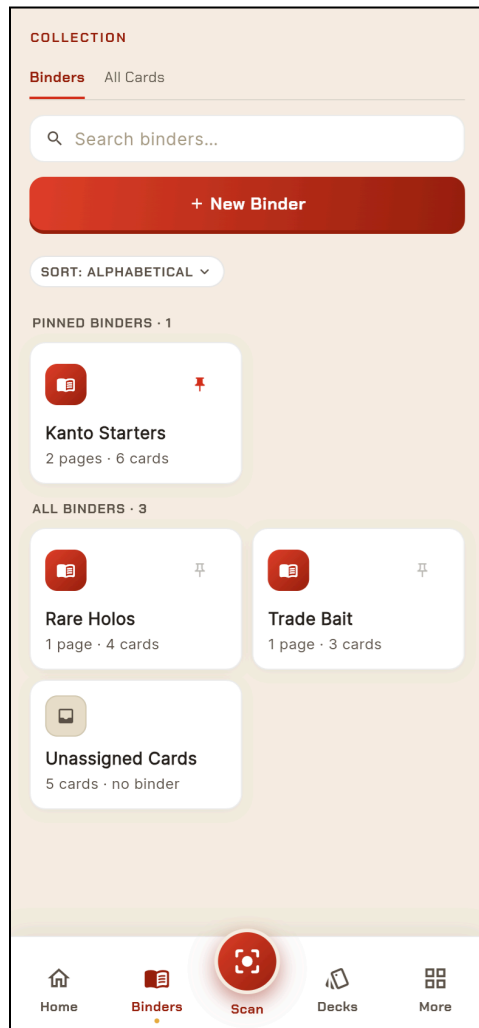

User Actions and Flow

- The user can select < **Back**, **Clear**, a card row, or **Done**.
- < **Back** returns to 06 Edit Trainer Card.
- **Clear** removes the current favorite card.
- Selecting a card row sets it as the favorite, while selecting the card artwork opens 14 Card Details.
- ✓ **Done** saves the selected favorite and returns to 06 Edit Trainer Card.

Navigation

Reached from the Favorite Card option in 06 Edit Trainer Card. After choosing a card, the user selects Done to return to the Trainer Card editing screen.

08 · Collection & Binder Screen · Binders

Collection & Binders · Wireframe page 7

Purpose

The Binders screen allows users to browse their collection through organized binders. Users can select a binder, view the cards stored inside it, move between binder pages, and add or edit cards.

User Actions and Flow

- The **All Cards** tab switches to **13 All Cards**.
- **Search binders** filters the available binder list.
- **+ New binder** opens **09 Create Binder**.
- **Edit binder** opens **12 Edit Binder** for the selected binder.
- Selecting a binder row displays the cards stored in that binder.
- Selecting a card tile opens **14 Card Details**.
- The dashed + tile opens **17 Add Card** for manual card entry.
- **< Prev page / Next page >** allows the user to move between pages while remaining on the Binders screen.
- The bottom navigation bar provides access to the application's other main sections.

Navigation

The screen can be reached through the Binders tab, the BINDERS tile on the Home Dashboard, or the Binders tab within the All Cards screen. It serves as the primary location for browsing and organizing cards by binder.

09 · Create Binder

STARTING PAGES SLOTS PER PAGE

1 6

DESCRIPTION (OPTIONAL)

What's this binder for?

Cancel + Create Binder

Collection & Binders · Wireframe page 7

Purpose

The Create Binder screen allows users to create a new binder for organizing their Pokémon cards. The user can provide a binder name and define its initial structure before adding cards.

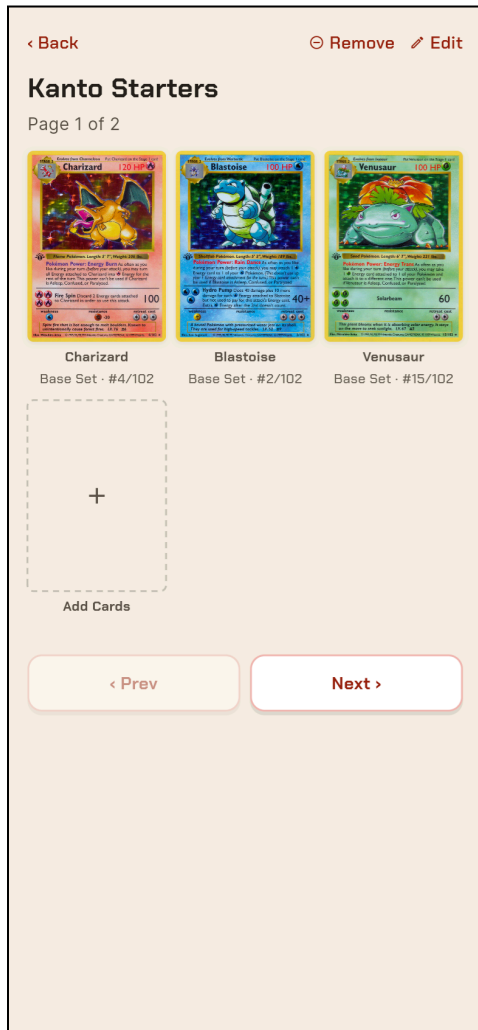

User Actions and Flow

- The user enters a binder name.
- The user selects the starting number of pages and slots per page.
- The user may provide an optional description
- Tapping **Cancel** returns to **08 Binders** without creating the binder.
- Tapping + **Create binder** creates the binder and returns to **08 Binders**.

Navigation

The screen can be opened from **08 Binders** or through + **New binder** on **04 Home Dashboard**. After the binder is created, the user returns to the Binders screen where the new binder can be accessed.

10 · Binder Details

Collection & Binders · New: Not in the wireframes

Purpose: Allows the user to view and manage the contents of a specific binder one page at a time. The user can review stored cards, navigate between binder pages, add new cards, edit the binder, or remove cards from the current page.

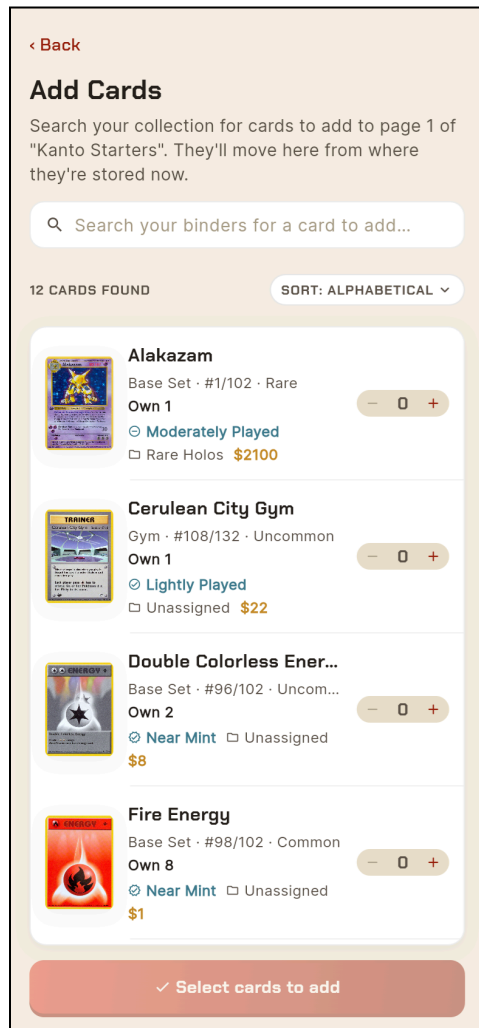

User Actions and Flow

- The user can select < **Back**, **Edit**, **Remove**, a card tile, the **Add Cards** tile, or the **Previous / Next** controls.
- Selecting < **Back** returns to 08 Collection & Binder Screen · Binders.
- Selecting **Edit** opens 12 Edit Binder.
- Selecting **Remove** activates removal mode, where tapping a card opens a confirmation dialog.
- Selecting a card opens 14 Card Details.
- Selecting **Add Cards** opens 11 Add Cards (Binder).
- < **Prev page / Next page** > changes the displayed binder page while remaining on this screen.

Navigation

Reached from 08 Binders after selecting a specific binder. The screen serves as the detailed workspace for managing the selected binder and its pages.

11 · Add Cards (Binder)

Collection & Binders · New: Not in the wireframes

Purpose

Allows the user to select cards from their collection and add them to the current binder page. The user can search, filter, sort, and choose the number of copies to add.

User Actions and Flow

- The user can select < **Back**, use the **Search** field, apply filters, use the **Sort** menu, adjust the +/- **steppers**, select a card row, or confirm the selection with **Add N cards**.
- < **Back** returns to 10 Binder Details.
- Searching, filtering, and sorting update the card list in place.
- The +/- **steppers** control the number of copies selected.
- Selecting a card row opens 14 Card Details.
- Selecting **Add N cards** adds the selected cards to the binder and returns to 10 Binder Details.

Navigation

Reached from the **Add Cards** tile on 10 Binder Details. After selecting the desired cards, the user confirms the selection and returns to the current binder page.

12 · Edit Binder

DESCRIPTION (OPTIONAL)

What's this binder for?

Cancel

✓ Save Changes

Delete Binder

Collection & Binders · Wireframe page 7

Purpose

The Edit Binder screen allows users to modify the information and structure of an existing binder. This provides flexibility when the user needs to update the binder's name, size, or description.

User Actions and Flow

- The user can edit the binder name.
- The user can modify the number of pages and slots per page.
- The user can update the binder description.
- Tapping **Cancel** returns to **08 Binders** without saving changes.
- Tapping ✓ **Save changes** applies the updated information and returns to **08 Binders**.

Navigation

The screen is reached from the Binders screen through **Edit binder**. After either saving or cancelling, the user returns to the main Binders screen.

13 · Collection & Binder Screen · All Cards

Collection & Binders · Wireframe page 7

Purpose

The All Cards screen provides a complete view of the user's card collection. It allows users to search for specific cards and narrow the displayed results using type filters.

User Actions and Flow

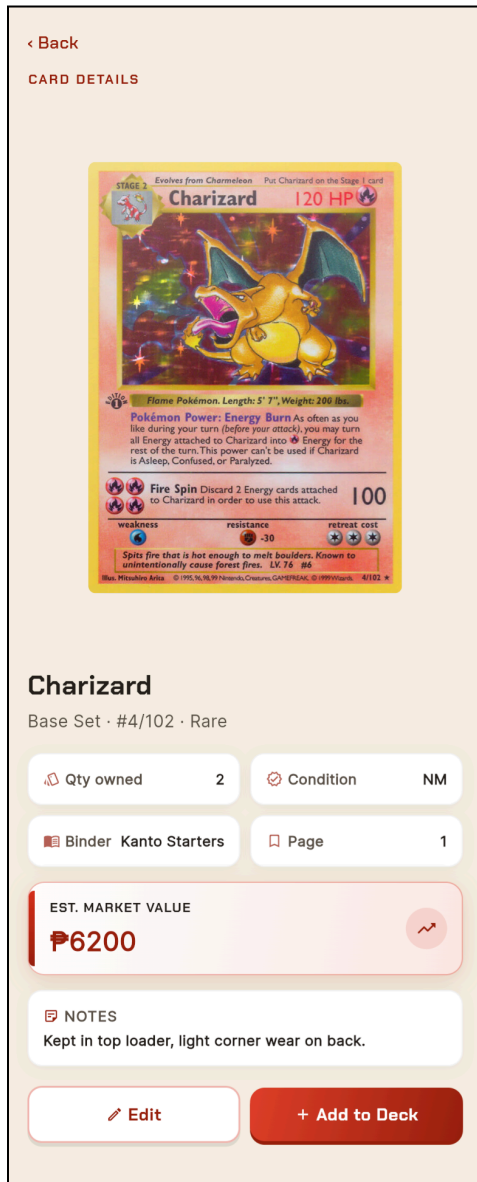

- The **Binders** tab returns the user to **08 Collection & Binder Screen · Binders**.
- The **Search bar** filters cards by name.
- Type chips such as **All, Normal, Grass, Water, and Fire** filter the collection based on card type.
- The type filter row can be scrolled horizontally to access additional options.
- Selecting a card tile opens **14 Card Details**.
- The bottom navigation bar allows the user to switch between the application's main sections.

Navigation

The screen can be accessed from the **CARDS** tile on the Home Dashboard or through the **All Cards** tab on the Binders screen. It provides an alternative way to locate a card without navigating through individual binders.

HOLY ANGEL UNIVERSITY

14 · Card Details

Collection & Binders · Wireframe page 7

Purpose

The Card Details screen provides a complete view of an individual card. It allows the user to review important information such as the card artwork, set, card number, rarity, quantity owned, condition, binder location, page, estimated market value, and notes.

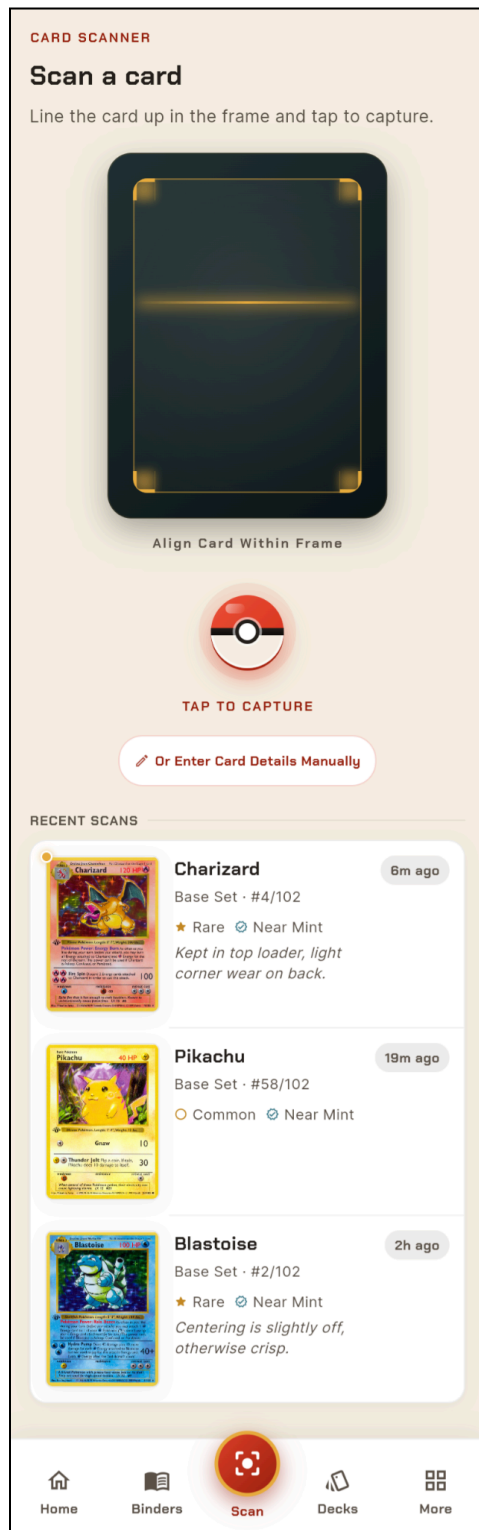

User Actions and Flow

- The user reviews the selected card's information and collection details.
- Tapping < **Back** returns to the screen where the card was selected, such as **08 Collection & Binder Screen · Binders**, **13 Collection & Binder Screen · All Cards**, or **15 Card Scanner**.
- Tapping **Edit card** opens **18 Edit Card**.
- The card can be interacted with through the drag-to-tilt 3D card feature, which represents the signature interaction of the application.

Navigation

The screen can be reached from multiple collection-related screens. It is the main destination when a user selects a card and acts as the central point for reviewing individual card information.

15 · Card Scanner

Card Scanner & Card Entry · Wireframe page 7

Purpose

The Card Scanner allows users to identify and add cards using the device camera. It also provides a manual entry option for situations where scanning is not available or the card cannot be recognized.

User Actions and Flow

- The user positions the card inside the camera viewfinder.
- Tapping **Capture** takes the scan and moves the user to **16 Confirm Card**.
- Selecting **Or enter card details manually** opens **17 Add Card**.
- The **Last scan result** > **View** option opens **14 Card Details** for the previously scanned card.
- The bottom navigation bar allows the user to move to the other main sections of the application.

Navigation

The screen can be accessed through the Scan button in the navigation bar or through + **Scan a new card** on the Home Dashboard. After capturing a card, the user proceeds to the confirmation screen before adding it to the collection.

16 · Confirm Card

Cancel
Confirm & Add

Card Scanner & Card Entry · Wireframe page 8

Purpose

The Confirm Card screen acts as a verification step between scanning and adding a card to the collection. It allows users to review the information recognized by the scanner before saving the card.

User Actions and Flow

- The user reviews the recognized card name, set, card number, rarity, condition, quantity, estimated value, and binder information.
- The user can verify or adjust the recognized details before adding the card.
- Tapping **Cancel** returns to **15 Card Scanner** without adding the card.
- Tapping + **Add to binder** saves the card and returns to **15 Card Scanner**, allowing the user to continue scanning additional cards.

Navigation

The screen is reached after the user captures a card through **15 Card Scanner**. Its primary purpose is to provide a confirmation step before the card becomes part of the collection.

Cancel + Add to Binder

Card Scanner & Card Entry · Wireframe page 8

Purpose

The Add Card screen provides an alternative to scanning by allowing the user to enter card information manually. It uses the same general information required by the scanned-card confirmation process.

User Actions and Flow

- The user manually enters the card's details.
- The user provides information such as the card name, set, card number, rarity, condition, quantity, value, binder, and other relevant details.
- Tapping **Cancel** returns to the screen from which the form was opened.
- Tapping + **Add to binder** saves the card and returns to the screen from which the form was opened.

Navigation

The screen can be reached from **15 Card Scanner** through the manual entry option or from **08 Collection & Binder Screen · Binders** through the add-card tile. This allows manual card entry to be performed either during scanning or while directly managing a binder.

Cancel ✓ Save Changes

Delete Card

Card Scanner & Card Entry · Wireframe page 8

Purpose

The Edit Card screen allows users to correct or update information associated with an existing card. It also provides an option to remove the card from the binder.

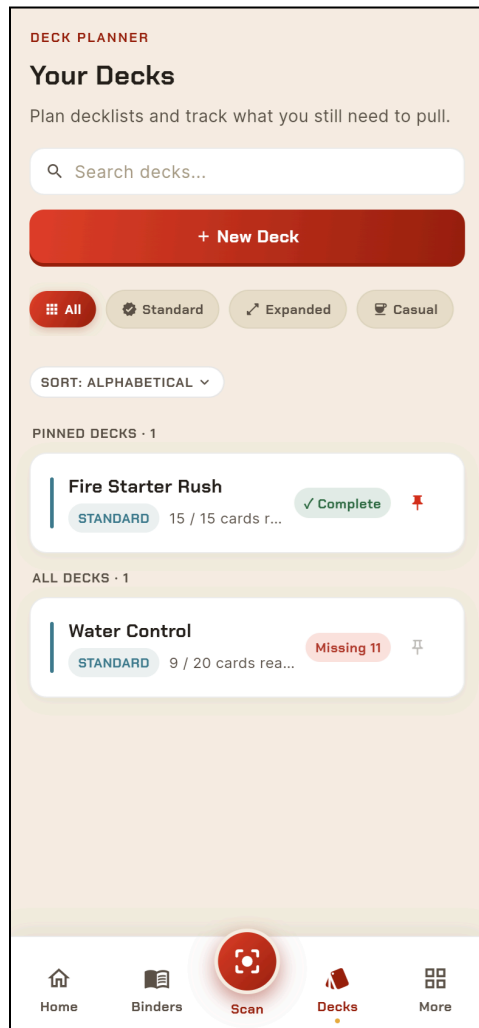

User Actions and Flow

- The user can modify the card's existing information.
- The user can update notes and other collection details.
- Tapping **Cancel** returns to **14 Card Details** without applying changes.
- Tapping **✓ Save changes** updates the card and returns to **14 Card Details**.
- Tapping **Delete this card** opens a confirmation dialog before removing the card.
- After deletion, the user is returned to the card list from which the card was originally opened.

Navigation

The screen is reached through the **Edit card** option on **14 Card Details**. It provides both editing and deletion functionality while keeping the user within the card management flow.

19 · Deck Planner

Deck Planner · Wireframe page 8

Purpose

The Deck Planner allows users to view their decks, check their completion status, and manage the cards included in a selected deck. It connects the user's collection with deck-building activities.

User Actions and Flow

- Tapping + **New deck** opens **20 Create Deck**.
- Selecting a deck row displays that deck's cards under the **Editing** section.
- The user can search their binders for cards that can be added to the selected deck.
- Tapping + **Add card to deck** adds the selected card while keeping the user on the Deck Planner.
- The user can switch between decks to manage their respective card lists.

Navigation

The screen is accessed through the **Decks** tab in the bottom navigation bar. It serves as the main workspace for managing existing decks and accessing the deck creation process.

Cancel + Create Deck

Deck Planner · Wireframe page 8

Purpose

The Create Deck screen allows users to establish a new deck by defining its name, format, target size, and optional description.

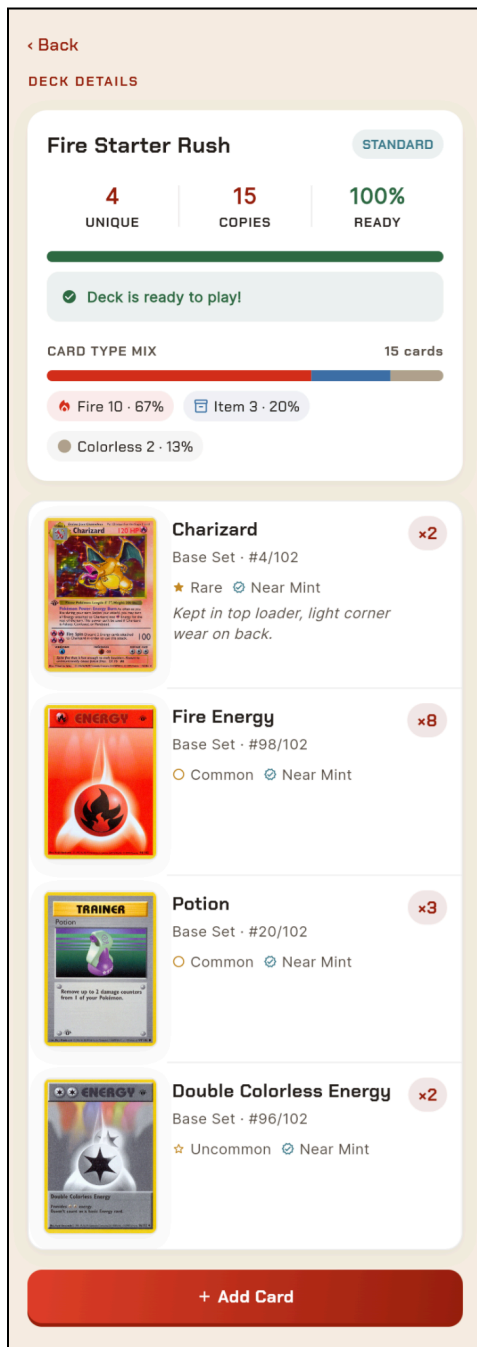

User Actions and Flow

- The user provides a name for the deck.
- The user selects a deck format.
- The user sets a target deck size.
- The user may enter an optional description.
- Tapping **Cancel** returns to **19 Deck Planner** without creating the deck.
- Tapping **+ Create deck** creates the deck and returns to **19 Deck Planner**.

Navigation

The screen is reached from the Deck Planner or through **+ New deck** on the Home Dashboard. After creation, the new deck becomes available for editing within the Deck Planner.

21 · Deck Details

Deck Planner · New: Not in the wireframes

Purpose

Allows the user to review a selected deck, check its completion status and card composition, and manage the cards included in the deck.

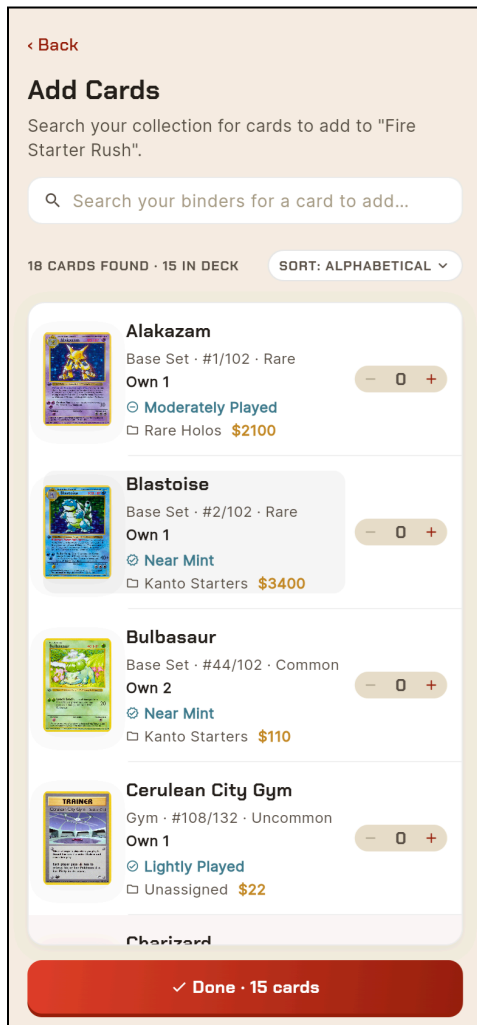

User Actions and Flow

- The user can select < **Back**, a card row, + **Add Card**, or < **Prev page** / **Next page** >.
- < **Back** returns to 19 Deck Planner. Selecting a card row opens a quantity dialog where the user can change the quantity, remove the card, or save the changes.
- Add Card** opens 22 Add Cards (Deck). < **Prev page** / **Next page** > changes the displayed deck page while remaining on 21 Deck Details.

Navigation

Reached from 19 Deck Planner after selecting a deck. It functions as the main management screen for the selected deck.

22 · Add Cards (Deck)

Deck Planner · New: Not in the wireframes

Purpose

Allows the user to select cards from their collection and specify how many copies of each card should be included in the selected deck.

User Actions and Flow

- The user can select < **Back**, search for cards, apply filters, change the sort order, adjust the +/- **steppers**, select a card row, or press **Done N cards**.
- < **Back** returns to 21 Deck Details.
- Searching, filtering, and sorting update the card list in place.
- The +/- **steppers** control the number of copies included in the deck.
- Selecting a card row opens 14 Card Details.
- Selecting ✓ **Done · N cards** saves the selected quantities and returns to 21 Deck Details.

Navigation

Reached from **Add Card** on 21 Deck Details. After selecting the cards and quantities, the user selects Done to return to the selected deck.

✓ Done · 15 cards

More Hub · New: Not in the wireframes

Purpose

Allows the user to select cards from their collection that they want to offer for trade. The user can search, filter, sort, and specify the number of copies available for trading.

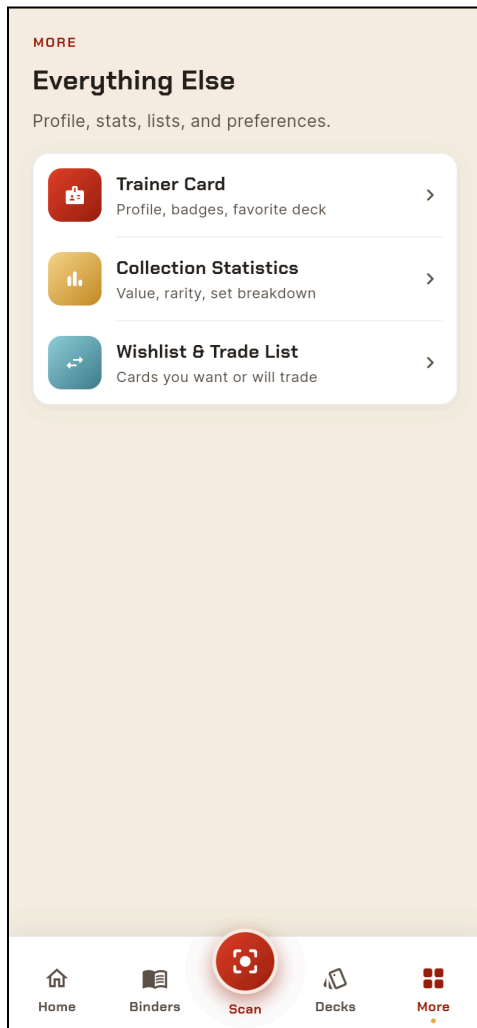

User Actions and Flow

- The user can select [< Back](#), search for cards, apply filters, change the sort order, adjust the +/- **steppers**, select a card row, or press **✓ Done · N cards**.
- [< Back](#) returns to 27 Trade List. Searching, filtering, and sorting update the card list in place.
- The +/- **steppers** control the number of copies available for trade.
- Selecting a card row opens 14 Card Details.
- Selecting **✓ Done · N cards** saves the selected cards and returns to 27 Trade List.

Navigation

Reached from the **Add Card** action on 27 Trade List. After selecting the cards and quantities, the user confirms the selection and returns to the Trade List.

24 · More Hub

More Hub · Wireframe page 8

Purpose

The More Hub provides access to secondary collection management features that are not part of the application's primary navigation flow. These include the trainer profile, collection statistics, wishlist, and trade list.

User Actions and Flow

- Tapping the **Trainer Card** row opens **05 Trainer Card**.
- Tapping the **Collection Statistics** row opens **25 Collection Statistics**.
- Tapping the **Wishlist & Trade List** row opens **26 Wishlist & Trade List · Wishlist**.
- The bottom navigation bar allows the user to return to the application's other primary sections.

Navigation

The More Hub is accessed through the **More** tab. It acts as the central navigation point for profile management, collection statistics, wishlist management, and trade management.

25 · Collection Statistics

More Hub · Wireframe page 9

Purpose

The Collection Statistics screen provides an overview of the user's collection and presents information about its estimated value, rarity distribution, and set distribution.

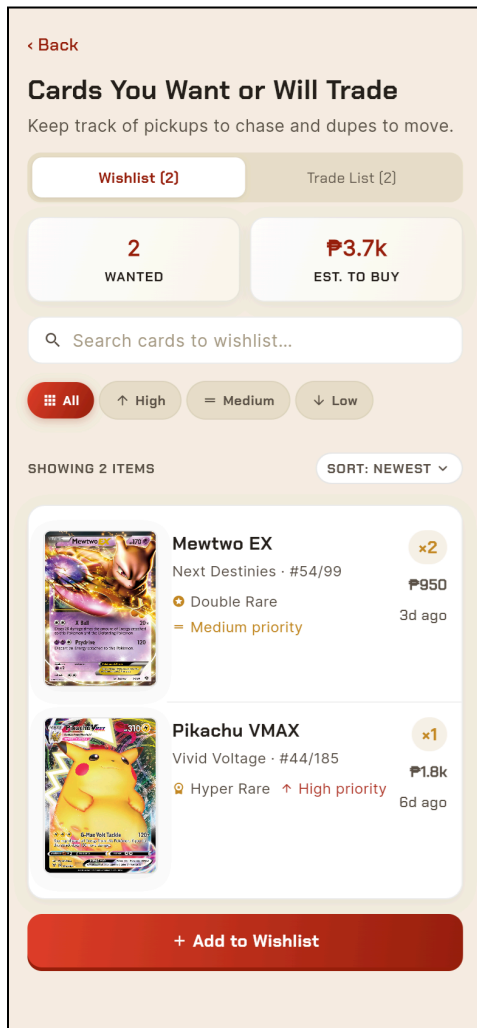

User Actions and Flow

- The user can review the total number of cards and estimated collection value.
- The user can examine the **Value by rarity** visualization.
- The user can review the **Cards by set** breakdown.
- Tapping < **Back** returns to **24 More Hub** when accessed from the More section.
- When accessed through the estimated value tile on the Home Dashboard, < **Back** returns to **04 Home Dashboard**.

Navigation

The screen can be reached from **24 More Hub** or directly from the **EST. VALUE** tile on the Home Dashboard. It provides a dedicated view for understanding the overall composition of the collection.

26 · Wishlist & Trade List · Wishlist

More Hub · Wireframe page 9

Purpose

The Wishlist screen allows users to maintain a list of cards they want to obtain. It also provides access to the Trade List through a shared tab interface.

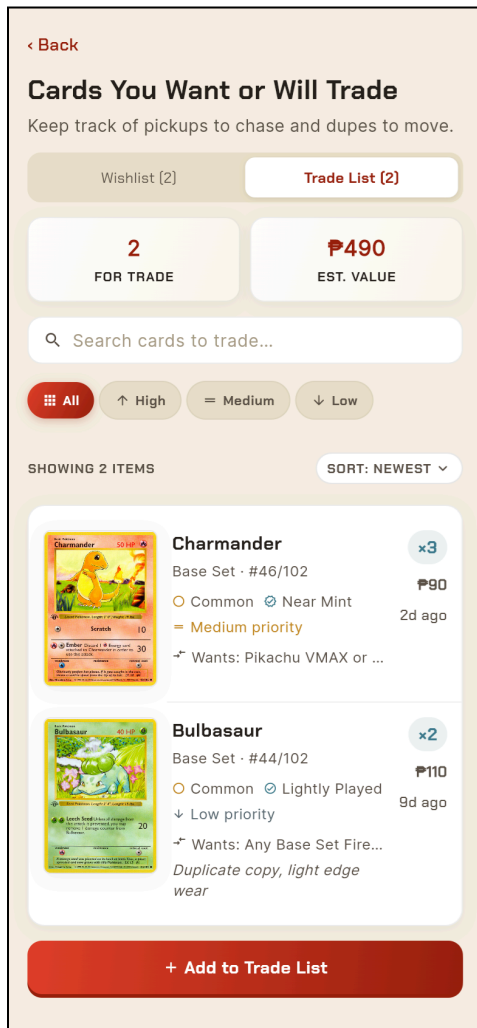

User Actions and Flow

- The **Wishlist** tab remains selected when the user is viewing desired cards.
- Tapping the **Trade List** tab switches to **27 Wishlist & Trade List · Trade List**.
- The search field filters cards in the wishlist.
- Tapping + **Add card** opens **28 Add Wishlist**.
- Tapping < **Back** returns to **24 More Hub**.

Navigation

The screen is reached from the More Hub through **Wishlist & Trade List**. The Wishlist and Trade List are designed as two related sections that can be switched between without leaving the overall feature.

27 · Wishlist & Trade List · Trade List

More Hub · Wireframe page 9

Purpose

The Trade List screen allows users to maintain a list of cards they are willing to trade. It uses the same overall structure as the Wishlist screen to keep both collection lists consistent.

User Actions and Flow

- The **Trade List** tab displays cards currently available for trade.
- Tapping the **Wishlist** tab switches to **26 Wishlist & Trade List · Wishlist**.
- The search field allows users to filter cards available for trade.
- Tapping + **Add card** opens **29 Trade Card**.
- Tapping < **Back** returns to **24 More Hub**.

Navigation

The screen is accessed through the Wishlist & Trade List feature and can be reached by switching from **26 Wishlist & Trade List · Wishlist**. It provides the management interface for cards the user has designated for trading.

28 · Add Wishlist

More Hub · Wireframe page 9

Purpose

The Add Wishlist screen allows users to add a card to their wishlist and record relevant information about the card they want to obtain.

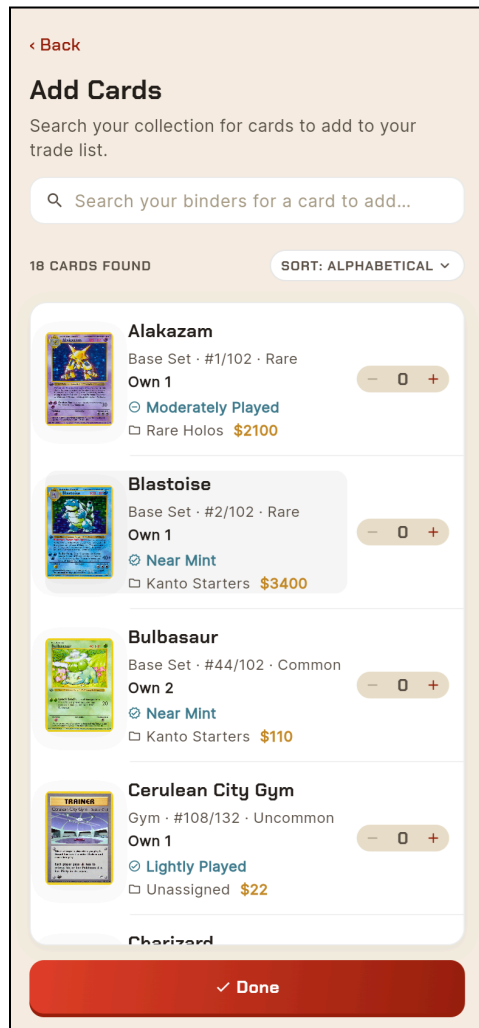

User Actions and Flow

- The user enters or selects the card information. • The user can specify the card's condition, quantity, estimated or maximum price, and additional notes.
- Tapping **Cancel** returns to **26 Wishlist & Trade List · Wishlist** without adding the card.
- Tapping **+ Add card** saves the wishlist entry and returns to **26 Wishlist & Trade List · Wishlist**.

Navigation

The screen is reached through the **+ Add card** option on the Wishlist screen. Once the card is added, the user returns to the Wishlist where the new entry can be viewed.

29 · Trade Card

More Hub · Wireframe page 9

Purpose

The Trade Card screen allows users to add a card to their Trade List. It records the information needed to identify the card that the user is willing to trade.

User Actions and Flow

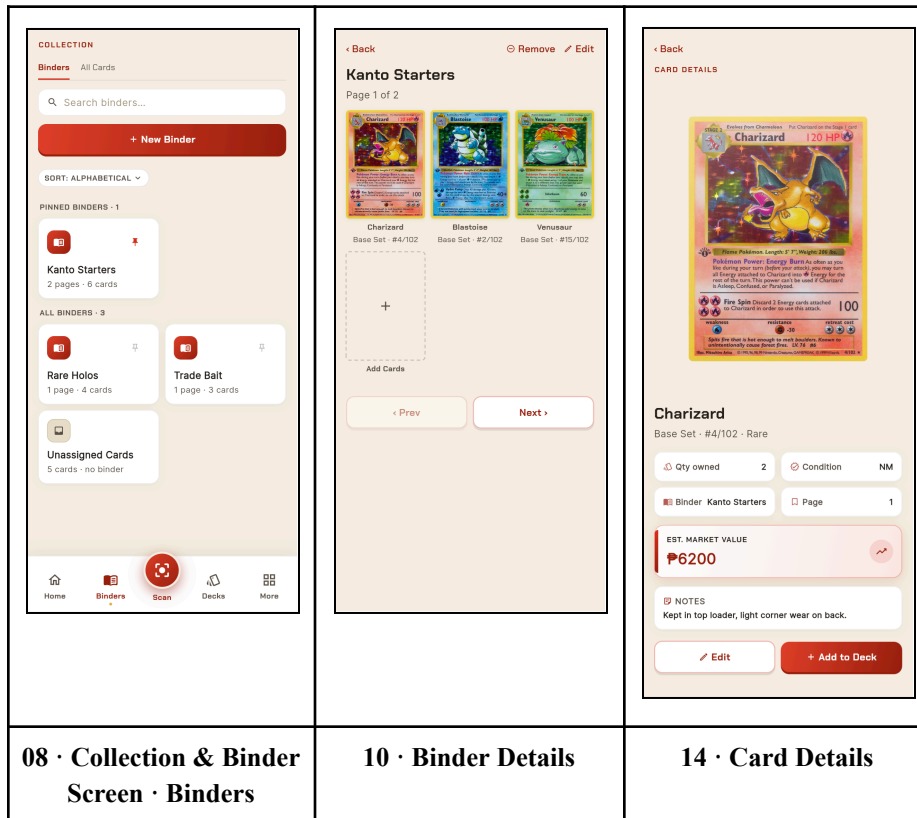

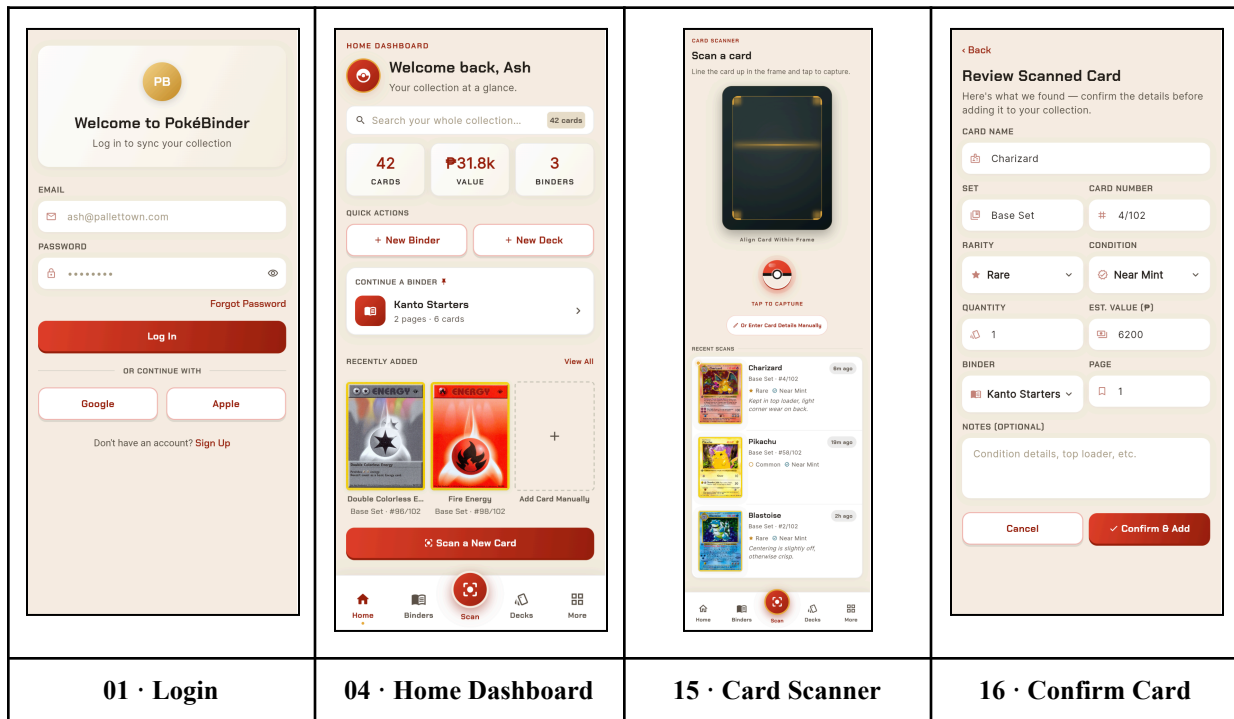

- The user enters or selects the card information to be listed for trade.
- The user provides details such as the card name, set, card number, rarity, condition, quantity, and value.
- Tapping **Cancel** returns to **27 Wishlist & Trade List · Trade List** without adding the card.
- Tapping + **Add card** saves the trade entry and returns to **27 Wishlist & Trade List · Trade List**.

Navigation

The screen is reached through + **Add card** on the Trade List. After the card is added, the user returns to the Trade List where the new trade entry can be viewed.

HOLY ANGEL UNIVERSITY

B. Journey

HOLY ANGEL UNIVERSITY

The main user journey identified during the wireframe sanity check is the process of **scanning a Pokémon card, confirming the scanned card, adding it to a binder, and finding the card again through the collection**. The screens above are presented in the order that the user encounters them during this journey.

C. What Changed, and Why

After creating the wireframes, I decided to continue with coding the actual program instead of creating the mockups right away. I did this to get a head start on development and to see how the planned screens and features would work in an actual application. While coding, I noticed some layout, navigation, and interaction issues that were not as clear in the wireframes.

After working on the initial version of the program, I was able to better visualize the program's design and flow. As a result, I added new screens and additional features, especially in areas that required more detailed steps. The table below explains the main changes, what I found during development, and why each change was made.

Screen or Element	What Changed	Why It Changed
Bottom Navigation Bar	Scan became a larger raised button instead of having the same appearance as the other navigation tabs. The navigation bar only appears on the main tab screens.	Scan is one of the main actions of the application, so making it more noticeable makes it easier to access. Screens opened from these tabs use a Back link instead of showing another navigation bar.
Buttons and Surfaces	Buttons now have different styles based on their purpose. Primary actions use red gradient buttons, secondary actions use ghost buttons, and Delete uses a danger-red style.	The wireframes used the same grey style for every button, making important actions look the same as secondary actions. Different styles make the purpose of each action clearer.
01 Login	The grey logo box was replaced with the gold "PB" monogram. Google and Apple sign-in buttons were also added, and Forgot Password was moved above the Log In button.	The changes make the login screen more complete and organize the actions based on their purpose.

HOLY ANGEL UNIVERSITY

04 Home Dashboard	The Scan a new card button was removed from the Quick Actions section because Scan is now part of the main navigation. A manual card entry tile was also added to Recently Added.	This reduces repeated actions and gives users another way to add a card when scanning is not needed.
07 Binders	The binder list and the selected binder's page grid were separated. A new 10 Binder Details screen was added, along with 11 Add Cards (Binder) .	Keeping the binder list and binder contents on one screen made the layout too crowded. The new screens give users a clearer way to manage a specific binder and add cards to it.
19 Deck Planner	The deck editing section was separated into 21 Deck Details and 22 Add Cards (Deck) .	A deck can contain up to 60 cards with quantities and status information. Separating these functions gives the deck more space and makes it easier to manage.
Card forms	Confirm Card, Add Card, and Edit Card now use the same general form with different titles and states.	The three screens contain mostly the same information, so using one form structure keeps the design consistent while still supporting different actions.
15 Card Scanner	The Last Scan Result panel was changed into a RECENT SCANS list showing three cards with time badges. A snackbar appears after a card is added.	A list gives the user more useful scan history without needing another screen. The snackbar also provides quick feedback after adding a card.
26 and 27 Wishlist and Trade List	The tabs now include counts, statistics, priority chips, sorting, and paging. Trade List also uses an Add Cards picker. A new 23 Add Cards (Trade List) screen was added.	The original lists were too simple for managing a larger collection. The new controls make it easier to find and organize cards.
05 and 06 Trainer Card	The Trainer Card now includes favorite card, binder, and deck sections, along with empty states, achievement badges, and a Title picker. A new 29 Choose Favorite Card screen was added.	These additions give the profile more customization options. A separate favorite card picker makes selecting a card easier without overcrowding the Edit Trainer Card screen.

HOLY ANGEL UNIVERSITY

25 Collection Statistics	The second statistics tile was changed from “P30.5k-DECKS” to Value , and a Top Value Cards section was added.	The value shown represents the estimated value of the collection, not the number of decks, so the label needed to be corrected.
Design system colors	Additional colors were added for success, warning, trainer information, card types, and the scanner.	The original palette did not cover all the states and categories needed in the mockups. Naming these colors as design tokens keeps the application consistent.
